

STAY SAFE IN CYBER SPACE

with Ingram Micro Cyber Security

CyberSAFE is designed for information technology end-users. There is an increasing reliance on workplace technologies and ensuring their proper use is critical to the protection of our information systems.

This course is designed to meet the needs of all organizations, irrespective of size, industry, or geographic location. This course prepares students to take the Certified CyberSAFE assessment exam.

In this course, you will briefly identify many of the common risks involved in using conventional end-user technology, as well as ways to use it safely, to protect yourself and your organization from those risks. You will:

- Identify the need for security
- Secure devices like desktops, laptops, smartphones, and more
- Secure your use of the Internet
